

• Benefits of Regular System •

MAINTENANCE

AC maintenance is an essential, cost-effective expense for your cooling system. Overall, it keeps your air conditioning unit functioning at peak efficiency but there are several advantages to scheduling your system for a seasonal tune-up.

1 Longer System Life

AC tune-ups can increase your air conditioner's life span by 10 to 15 years. Regular inspections help you identify system issues before they get out of hand and cause irreversible damage to your AC unit.

2 Improved Air Quality

Say goodbye to cool air insufficiency and frequent downtime because of clogged filters, dusty or moldy ducts and returns, or smoke and soot from overheating components. Enjoy fresh cool air all year long with consistent servicing.

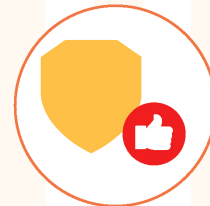

3 Reduces Electricity Bills

Cooling units will use more energy when they do not receive regular system maintenance. An inefficient system has many underperforming components that consume more energy because of blockages, leakages, overheating, freezing, and general wear and tear. With a system tune-up from Guy's Air Conditioning and Heating, we will ensure your air conditioner operates at peak performance with an in-depth inspection and tune-up during our maintenance visit and by making any necessary repairs that are identified.

4 Enhanced Comfort

No stuffy, moldy, or limited cool air supply during summer. A tune-up gets rid of any problem that may be causing discomfort before it becomes a hazard.

5 Call Guy's Air Conditioning and Heating

Does Your air conditioning unit need servicing? Call the experts at Guy's Air Conditioning and Heating to find out! We provide AC tune-ups, repair, installation, and replacement. Contact us on 281 306 9875 for all of your AC system needs.
